

## Fabric Covered Magnetic Board

### Supplies:

- Frame, Wood Board or Panel
- Metal Sheet
- Fabric
- Spray Adhesive
- E-6000
- Acrylic Paint
- Scissors
- Paintbrush

### Directions:

(Tip: For this project you can use a wooden 12" x 12" panel, a frame, a board, or a plaque.)

1. Using the paintbrush apply paint, in the color of your choice, to the frame.
2. Set the frame aside to dry.
3. Measure and cut the fabric to fit onto the metal sheet, leaving an extra inch in height to wrap around the metal sheet.
4. Apply spray adhesive to the sheet and place the fabric on top of it, wrapping the top and bottom end towards the back of the metal sheet. (Tip: Be sure to smooth out any wrinkles before allowing the sheet dry.)
5. Insert the metal sheet into the frame or if you are using a board or panel, adhere it with glue.
6. After the glue dries the frame is ready to hang.
7. Feel free to add embellishments of your choice to the project. (Tip: If you would like matching magnets to place on your new fabric covered magnetic board just go to the Porter's Projects blog pages and find our project sheet on how to make your own custom designed magnets.)
8. In the picture above metal border embellishments were added.
9. Enjoy your fabric covered magnetic board!
